

# Fueling Vietnam with stable LPG supply system

# E1 Terminal Vietnam Launches the largest LPG Tank Terminal in North Vietnam

E1 has successfully operated its LPG business in Korea since 1984. Currently, E1 is exploring opportunities to expand its LPG business into new countries and Vietnam is the first country where E1's successful LPG business model will be applied.

E1 Terminal was established with an LPG refrigerated tank terminal with a total capacity of 176,000m3 (80,000 metric tons), the largest in North Vietnam, and plans to supply more than 1 million tonnes of LPG per year from 2026.

## Benefit 01 Competitive Price

As the only LPG refrigeration terminal in North Vietnam, we can import LPG via the shortest import route, allowing us to provide the best prices to our LPG customers.

Previously, importing LPG into North Vietnam required a two-step process, with a refrigerated carrier (VLGC) first transporting large quantities of LPG to the South China Refrigeration Terminal, and then smaller quantities were transported and imported by smaller pressurised gas carriers.

The E1 terminal, on the other hand, can import large quantities of LPG directly via refrigerated carriers (VLGCs) to the refrigeration terminal.

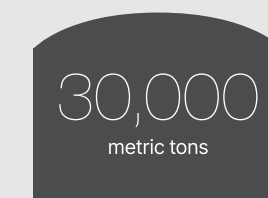

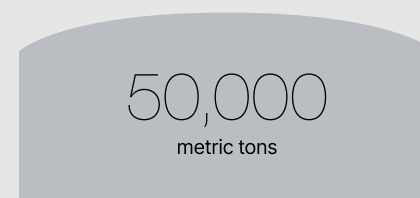

## Benefit 02 Stable Supply

As the terminal with the largest storage capacity in Northern Vietnam, we can provide the most stable supply to our LPG customers. The E1 Terminal also supported by E1, which has signed long-term supply contracts with several LPG trading companies around the world to ensure security of supply and counteract price volatility.

## Benefit 03 Customised Quality

As the only terminal in Northern Vietnam to be equipped to separate C3 and C4 tanks for import storage, E1 Terminal can provide customised C3:C4 composition according to customer's specific requirements. On the other hand, other suppliers only provide LPG in specific ratios (usually 50:50).

## Benefit 04 Safety Assurance

As we will be bringing Vietnam E1's safety technology which has been proven by 40 years of zero accident and counting—the longest record in the private energy industry, we can to provide a safe service to our LPG customers.
